EXPERIENCE

Cambia Health Solutions: Sr. Data Reporting Analyst, Operations Business Intelligence

February 2018 - Present | Portland, Oregon

Overview: Lead Sr. Data Reporting Analyst on the Operations Business Intelligence, Data Analytics and Integration team. Our team functions as internal consultants on data related projects for operations. We specialize in the entire data development process, from data acquisition, integration using ETL tools, and data modeling to creating sustainable reporting layers and Tableau dashboards. We work in an AGILE framework to manage our workload and we collaborate with members of the business to deliver value through the use of data and analytics.

Responsibilities:

- Develop SQL queries in SQL Server, Postgres, and Greenplum to prepare data for reporting and analysis.
- Create Tableau dashboards that support operations while using data visualization best practices.
- Meet with internal customers to understand business needs and document requirements.
- Manage and prioritize the Customer Service team's backlog of requests as SCRUM Master.
- Maintain data pipelines using Talend ETL tool and create new pipelines as required by business needs.
- Contribute to Cambia's corporate strategy by aiming to increase our Net Promoter Score in every data initiative.

Accomplishments:

- Developed dashboards in Tableau to track and benchmark the performance of our call center staff. This standardized the KPI's that supervisors use to coach their employees and saved countless hours by centralizing disparate data, which allowed supervisors to focus on coaching.
- Created and maintained an analytics database that held critical KPI's used for performance reporting.
- Selected to be the Talend ETL administrator for the Customer Service team and was responsible for monitoring and maintaining data pipelines.
- Performance tuned queries and developed innovative ways of handling larger datasets of 40+ million records.

Environment: MS SQL Server 2016, SQL Server Management Studio (SSMS), Tableau, Greenplum, Toad Data Point, Talend

Blue Harbor Senior Living: Sr. Business Intelligence Analyst

August 2016 - February 2018 | Portland, Oregon

Responsibilities: Create and maintain databases, integrate new sources of data using ETL tools, and develop SQL queries to prepare data for reporting and analytics. Gather user requirements to create automated reports using SSRS. Promote sound data governance as the company's primary data steward. Assist in the yearly budgeting and planning process through the use of data and analytics. Interact with senior leadership and private equity ownership group to assist with ad-hoc data projects.

Accomplishments:

- Mapped the data relationships of our ERP's data model without a data dictionary, which led to the acquisition of new data and insightful analytical opportunities for the entire company.
- Developed an automated report using SQL and SSRS to track the occupancy of twenty-two senior living facilities, which saved 10+ hours a week of manual work and significantly eliminated errors.
- Created an automated daily dashboard for internal and external stakeholders that tracked key performance indicators and allowed for consistent monitoring of the business.
- Developed an automated sales commissions report using SQL and SSRS that fully replaced a manual process, saved over 20+ hours a month, and eliminated financial errors.
- Successfully led a project to convert our company's CRM system by acquiring and mapping our sales data to match the data model of the target system.

Environment: Visual Studio, MS SQL Server 2016, SQL Server Management Studio (SSMS), SQL Server Reporting Services (SSRS), SQL Server Integration Services (SSIS), Microsoft Excel, VBA

The Northern Trust Company: Sr. Investment Associate

October 2014 - August 2016 | Boca Raton, Florida

Responsibilities:

- Developed custom reporting solutions using Excel, VBA, and internal business intelligence tools.
- Analyzed client financial data using quantitative and statistical formulas in Excel.
- Created custom VBA scripts to organize, clean, and automate the reporting process.
- Verified investment returns and corrected any discrepancies affecting performance reporting.
- Developed custom dashboards in Excel to monitor investment performance.
- Created ad-hoc cash flow and balance sheet analyses to support key business decisions.
- Extracted and analyzed large data sets of client financial data to find and correct errors.
- Created custom client presentations using PowerPoint, Adobe Pro, and Business Objects.

SunTrust Investment Services: Investment Associate

August 2008 - April 2012 | Miami, Florida

Overview:

My role as an Investment Associate was to develop long term financial plans, analyze and explain investment products on behalf of our clients, assist with the day-to-day administration of our client's financial assets, and respond to any client needs. I acted as a trusted advisor and resource and as a result, I was awarded the 2009 Investment Associate of the Year.
